

## Proposal: Adding Dark Mode to Zoho System

### *Introduction*

This proposal outlines the implementation of feature Dark Mode, in the Zoho system. Dark Mode offers users a visually comfortable interface.

### *Dark Mode*

- **Purpose:** To provide users with an alternative color scheme for reduced eye strain and improved readability, especially in low-light environments.
- **Implementation:** Utilize CSS to create a dark theme that can be toggled on or off by users.
- **Benefits:**
  - Improved User Experience: Dark Mode offers a modern and visually appealing interface.
  - Accessibility: Dark Mode can benefit users with visual impairments or light sensitivity.
  - User Preference: Many users prefer dark themes for their applications.

### *Implementation Plan*

1. **Requirements Gathering:** Identify user preferences and system requirements for Dark Mode.
2. **Design and Development:**
  - Develop Dark Mode theme and integrate it into the Zoho system's interface.
3. **Testing and Validation:** Conduct thorough testing to ensure Dark Mode functionalities work seamlessly and meet user expectations.
4. **Deployment:**
  - Roll out Dark Mode features to a small group of users for initial feedback.
  - Gradually deploy the features to all users once feedback has been incorporated and the features are stable.

**Conclusion:** The addition of Dark Mode features to the Zoho system will enhance user experience, improve accessibility, and provide users with efficient access to information and support.
